

# BIO FLUSH™

FLUSH LESS - SAVE WATER

Breakthrough bio-enzyme cistern block which hugely reduces the need to flush. Save up to 140 litres daily! After eventually flushing, unique 9 enzyme function turns human waste in sewer systems into a free water source!

## GREEN CLEANING TECHNOLOGY

Billions of years ago Mother Nature had already solved the problem of how to keep the Earth clean, naturally. By using beneficial enzyme producing micro-organisms, solids & fats which cause toilet & plumbing blockages, build ups, or slow moving water, can be quickly broken down far more effectively than traditional harmful chemicals, now at a much lower cost.

## BLUE ENZYME LIQUID

On every flush, Bio Flush™ releases a powerful blue bio-enzyme liquid which is loaded with beneficial micro-organisms which coat and sit in the toilet bowl & plumbing lines, turning the plumbing works into a living eco-system. These micro-organisms then secrete enzymes to permanently digest organic waste. They have a hugely beneficial effect on septic systems, septic tanks, & sewer plants. Fats & solids are permanently broken down into carbon dioxide & water. Septic tanks require far less manual cleaning & expensive waste removal, while septic & sewer plants are aided with sludge breakdown.

## FLUSH LESS - SAVE WATER

Bio Flush™ technology neutralizes urine odours, while disguising its colour. No odour means not having to flush toilets, thereby saving a huge amount of water, up to 140 litres daily, per cost effective Bio Flush™! Average toilets are flushed about 2000 times per year. That means a portion of over 15000 L of drinking water literally goes down the toilet!

## POWERFUL FOAM CLEANING

Bio Flush™ eco-chemistry helps to descale, keep the toilet bowl shiny & clean, & over time helps prevent stains & uric scale build-up.

## ACTUALLY ELIMINATES ODOURS

Chemical products normally only mask, but don't eliminate odours. BioClean digests odour causing compounds permanently & releases a light pleasing fragrance on each flush which also helps to provide the bathroom with a fresh, clean smell.

## 9 ENZYME SYSTEM

Bio Flush™ contains class leading 9 enzyme system which quickly & effectively digests all toilet system waste & much more:

- Lipase (fats)
- Amylase (starches)
- Urease (urea)
- Protease (proteins)
- Cellulase (cellulose)

- Esterase (esters)
- Phosphatase (phosphate group from proteins)
- Hemicellulase (non-cellulose polysaccharides)
- Xylanase (hemicellulose fibre)

## SEPTIC & SEWER SYSTEMS

Each Bio Flush™ block is loaded with over 100 billion beneficial micro-organisms! They multiply within minutes, soon their offspring in turn multiply, & in no time you have trillions of beneficial microorganisms secreting enzymes & turning sewer systems into a giant living ecosystem. The benefits are enormous for toilets, plumbing lines, septic tanks, sewer pipes, pump stations & sewer plants. Sludge & organic build-ups are converted into carbon dioxide & a free water source! Septic tanks require less manual cleaning & expensive waste removal.

## DIRECTIONS FOR USE

Conventional cistern blocks are normally only 40g in size, whereas Bio Flush™ is supersized at 120g for 3 times the weight & more beneficial active ingredients. Place one block into the cistern bowl opposite the water inlet pipe. Replace when water colour fades.

## PACKAGING/ SHELL LIFE/ STORAGE

Store in a cool, dry place. Avoid excessive inhalation. Wash hands thoroughly after handling. Available - by units 120g each
