Revolutionary eco-friendly bio enzyme high foaming wash and wax shampoo for cleaning motor cars, trucks and trains which benefits oil sumps by helping to digest oils into water and carbon dioxide.

Description:

BioClean Wash & Wax is an eco-friendly biodegradable high foaming special formula wash and wax product for cleaning motor vehicles, trucks, trains and more. Untreated oil run off from vehicle washing is a huge problem for the environment. BioClean Wash & Wax is completely unique in that it is formulated with bio-enzymes to help digest hydrocarbon effluent onsite into water and carbon dioxide.

Features & Benefits:

BioClean Wash & Wax is extremely simple and effective to use and is designed to remove vestiges of traffic film that may have become engrained with particulate soils, in a way that will not need much mechanical assistance, saving the vehicle's top coat from abrasion. BioClean Wash & Wax leaves a well-drained surface after rinsing with clean water that is very easy to polish. BioClean Wash & Wax will promote "sheeting" off of water from the surface which helps to

minimize streaking. Bioremediation is the natural process of biologically converting hazardous chemicals, such as hydrocarbons, into non-toxic by-products using microbes, enzymes, oxygen and other nutrients. Bioremediation can provide the opportunity for facilities to eliminate and/or reduce hazardous waste, workplace health and safety risks, environmental liability and costs.

International Benchmark:

A petrochemical company presented their current internationally established benchmark bacterial product to performance challenge against the indigenous bacteria in Oil Gobbler. Our local bacteria showed virtually identical Total Petroleum Hydrocarbon (T.P.H.) degradation, while costing a fraction of the price. An unexpected result showed our Oil Gobbler bacteria degrading waste at a staggering 20% faster rate with profound further cost and environmental advantages.

Applications:

BioClean Wash & Wax can be effectively applied to:

- * Motor cars and motor cycles.
- * Light delivery vehicles and small trucks.
- * Heavy trucks and trains

Use & Dilutions:

BioClean Wash & Wax should be diluted at between 1:10 and 1:50 depending on the condition of soiling. It should not be allowed to dry off in direct sunlight before rinsing as this may cause streaking. BioClean Wash & Wax gives the best finish when the vehicle is towel dried after rinsing. To help speed up remediation in oil sumps and effluent run-off use, in conjunction with BioClean Oil Gone™ which is also a bio-enzyme technology suitable for degreasing engines, wheels and under carriages. For the quickest remediation of oil sumps dose a pure bio-enzyme solution of Oil Gobbler™ Bacteria directly into the affected sump using the BioClean Automated Dosing System. Avoid using the above products with other harsh chemicals. These chemicals can kill the good bacteria and enzymes generated by the Oil Gobbler™ Bacteria range negating their effect in oil remediation.

Shelf Life & Storage:

Eco-friendly BioClean Wash & Wax will be stable for up to 12 months when stored between 10°C - 38°C, away from direct sunlight. After 12 months we recommend checking the Certificate of Analysis parameters to ensure product fitness for use.
